

BreakOut

System Manual

Risk warning

Before you begin trading on Real account please carefully consider your investment goals, risk and experience you have. It should be noted that Forex is a leverage based market. It should be remembered that leverage can work both in your advantage and disadvantage as well. Therefore there is high risk of losing a part or all of your financial input placed on your account and because of that you should remember to trade with the amount of money which you can lose without taking any influential financial damage.

BREAKOUT

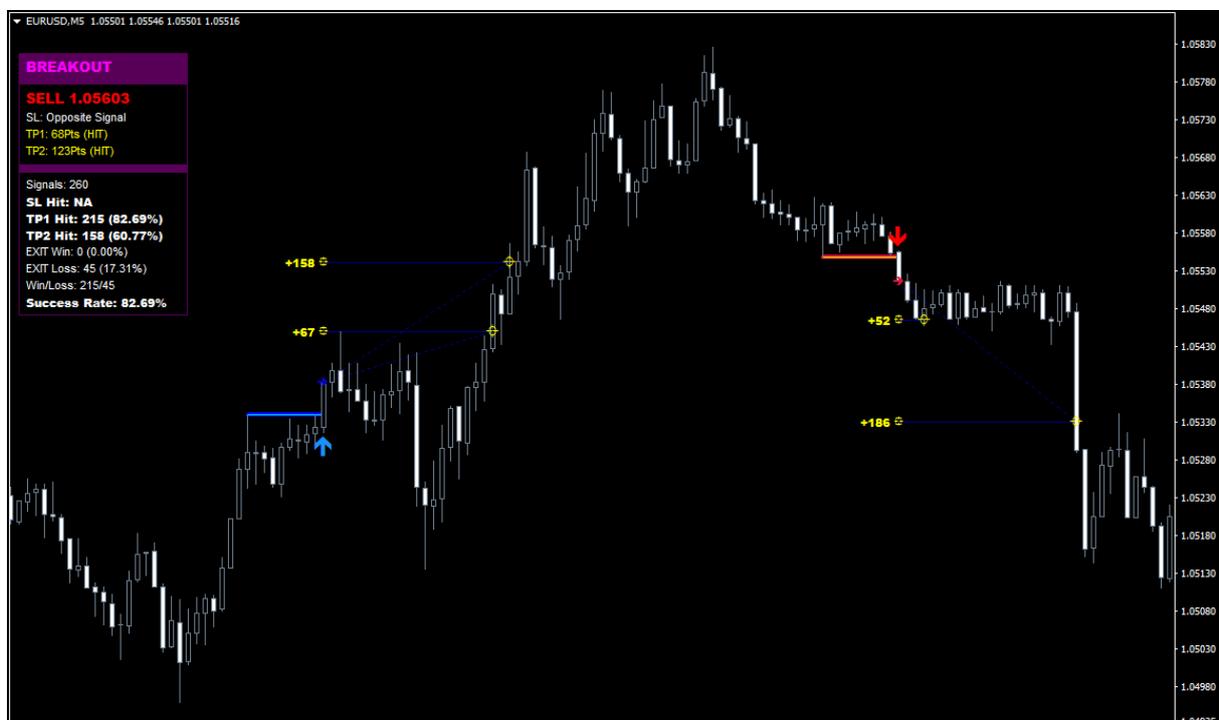

HOW IT WORKS

Signals are very easy to read.

Every signals comes with alert!

BLUE ARROW = BUY SIGNAL

SELL ARROW = SELL SIGNAL

Breakout

Entry and take profit levels.

Every signal provides entry and 2x take profit levels.

As stop loss we use opposite signal.

Breakout

Additional settings

Indicator provides a lot of settings that are easy to understand, so we will Focus on the most important ones.

‘Period’ – this number can be changed to receive different signal filtering.

The higher the number – the more filtered signals.

The lower the number – to more aggressive signals.

‘Take profit factor’ – the higher the number the more takeprofit you can expect.

The lower the number, the more ‘scalping’ take profit levels it provides (less pips, but more secure profit).
