System Manual

Risk warning

Before you begin trading on Real account please carefully consider your investment goals, risk and experience you have. It should be noted that Forex is a leverage based market. It should be remembered that leverage can work both in your advantage and disadvantage as well. Therefore there is high risk of losing a part or all of your financial input placed on your account and because of that you should remember to trade with the amount of money which you can lose without taking any influential financial damage.

Scripts	08.05.2018 16:02	

- Restart your MT4

- Open your favourite chart. Press the right mouse button and pick GTR template.

- System is ready for trading

Trading Modes

System provides three different trading styles (templates) depending on your expectations, risk appetite and experience in trading.

GTR1

It's characterized by the fastest signals as well as the largest potential profit with increased risk. If you are familiar with scalping and catching the quick market movements, you should choose this trading mode. Scalping mode is recommended for advanced traders.

GTR2

Is the most universal mode, providing the most balanced signals.

It provides stable signals with limited risk.

This mode is recommended for beginners as well as experienced traders.
GTR3

Provides the most secure signals, with less profit potential at the same time. Pick this mode if you want to spend the minimum amount of time in front of the computer.

This mode is recommended for every type of trader.

System overview

System contains 3 major sections.

1. Entry Indicator.
2. Info Dashboards.
3. Round number levels.

HOW DOES IT WORK.
Entry Examples.

System provides very easy BUY/SELL signals.
Open your favourite trading pairs and wait for an alert.

BLUE arrow is a BUY signal.
RED arrow is a SELL signal.

Where to close the trade?

System provides round levels that can be used as take profit levels.
Price usually respects those levels, so it's good to consider it as
potential take profit.

You can also use different exit techniques like:
- Support resistance zones
- Risk to reward ratios

STOP LOSS

Stop loss order should be placed in the technically best place:

- the last swing high (for the SELL trade)
- last swing low (for the BUY trade)
- at the round number (if close)
- close to important support/resistance area.

Try to minimalize your stop loss and aim for high RR ratios.

For example:
If the last swing is MUCH closer than round level, put the stop loss on the last swing.
The ideal trades in daytrading (m5-m15) are when your risk 15-20 pips and aim for 40-50.
If you scalp (m1-m5)try to risk no more than 10 and try to reach 20+ pips.
If you are swing trader (h1-d1) the stop loss should be around 30-50pips, while take profit 100+ pips.

Handful of advice

- try to trade on the major sessions only - the more volatility the better (there is
usually more pips/profit to catch).

- glance through the calendar of economic news before each day of trade. If
there are some important 'red' news, its better to wait until they are
announced.

- pay particular attention to days in the calendar where the most important
news are, like: non-farm payrolls, ECB press conference, FOMC.
These news are crucial to the market and sometimes investors will wait
outside
of the market for their announcement.

- do not worry if you are late for a signal. It is better to wait for another
trade
than get into one that has already been on its way a long time and may very
well turn back.

- the system can be used on any MT4 platform instrument. However, we
recommend you stick to 'majors' due to lower spread and good liquidity.
